## Wireframe

The web application for Credit Card Default Prediction has a single page, where the user give their input.

1. Enters inputs
2. Submits the inputs
3. The application displays the output, indicating whether the customer is likely to default on the credit card payment in the following month.

Two types of data are entered

1. Personal /Demographic information
2. Behavioral information

### Credit Card Defaulter Prediction

<b>Gender</b>	<input type="radio"/> Male <input type="radio"/> Female
